

Luxembourg Research Evaluation 2022

Daniel S. Hain

11 May, 2022

Introduction

The bibliometric part of the 2022 research evaluation is based on Scopus data, one of the most comprehensive providers of academic publications. However, some potentially relevant scholarly output is not covered. Reasons might be that the publication outlet is not Scopus indexed. While most academic journals are, the coverage of bookchapters and conference proceedings is less exhaustive. In rare cases, errors in the database can also lead to underreporting.

To get an exhaustive overview covering all scholarly output, find below a breakdown of publications not matched with Scopus, and therefore not included in the overall evaluation.

By Type

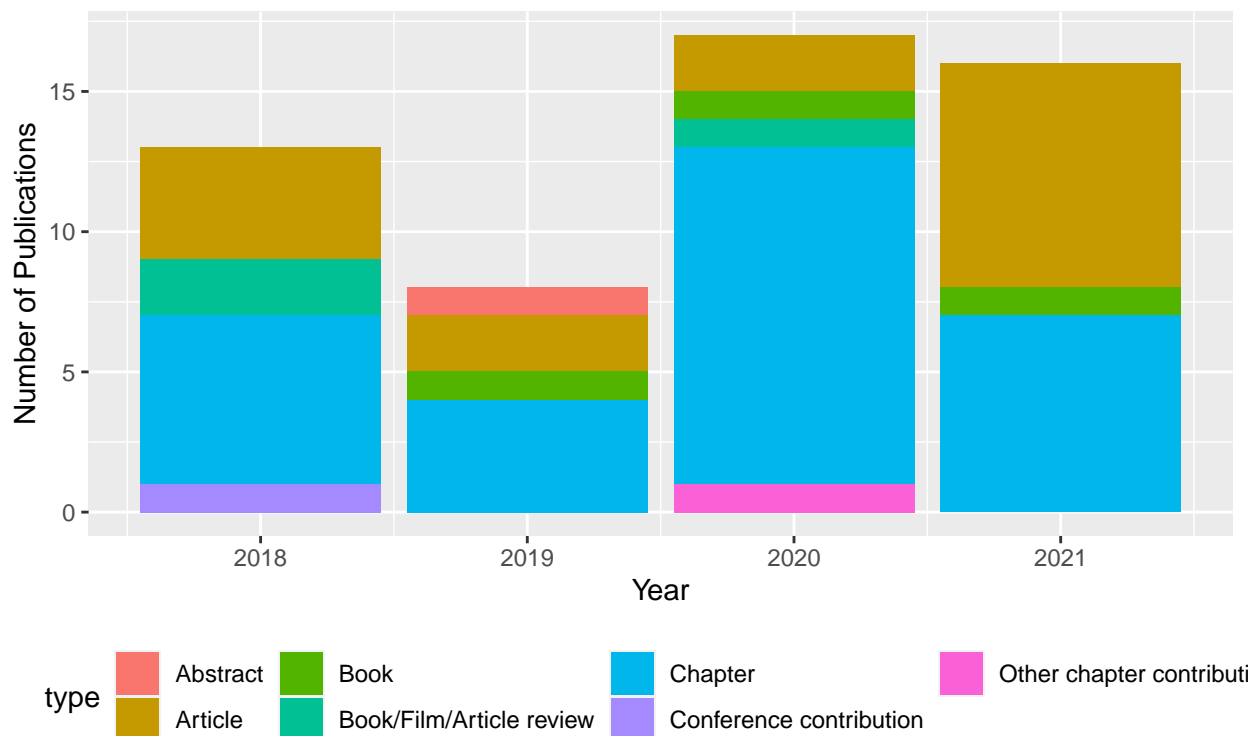

LISER publications dept. UD not included in reporting

By reason

LISER publications dept. UD not included in reporting

By publication type

By outlet (Journal articles only)

Table 1: Outlet of unmatched journal publication
